Trial Store Layout Impact Analysis

Name : S. Chandu

quantium

Classification: Confidential

Key Findings from Analysis

The new store layout led to a consistent increase in sales across all trial stores

◆ Key Findings

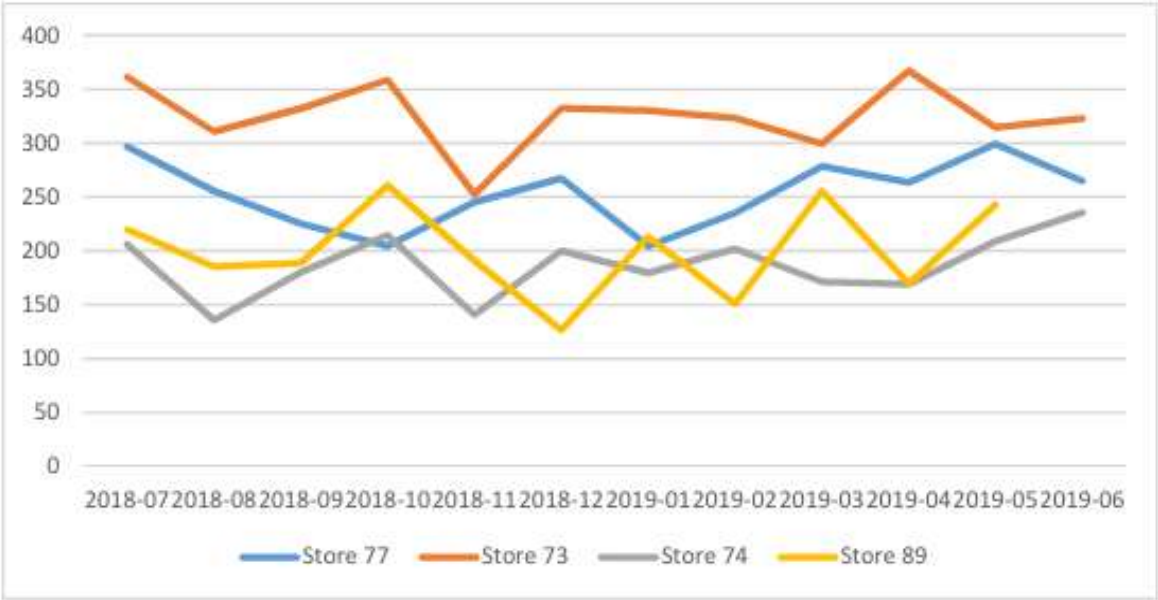
- ❑ Trial stores (77, 86, 88) achieved **6%–7% increase in sales**
- ❑ Control stores showed **declining performance**
- ❑ Performance improvement observed **only in trial stores**
- ❑ Results are **consistent across multiple locations**

Store layout change directly improves sales performance

quantium

Classification: Confidential

Sales Performance Comparison (Trial vs Control Stores)



- Trial store (77) shows consistent growth during trial period
- Control store (89) shows flat or declining trend
- Clear divergence indicates impact of new layout

quantium

Classification: Confidential

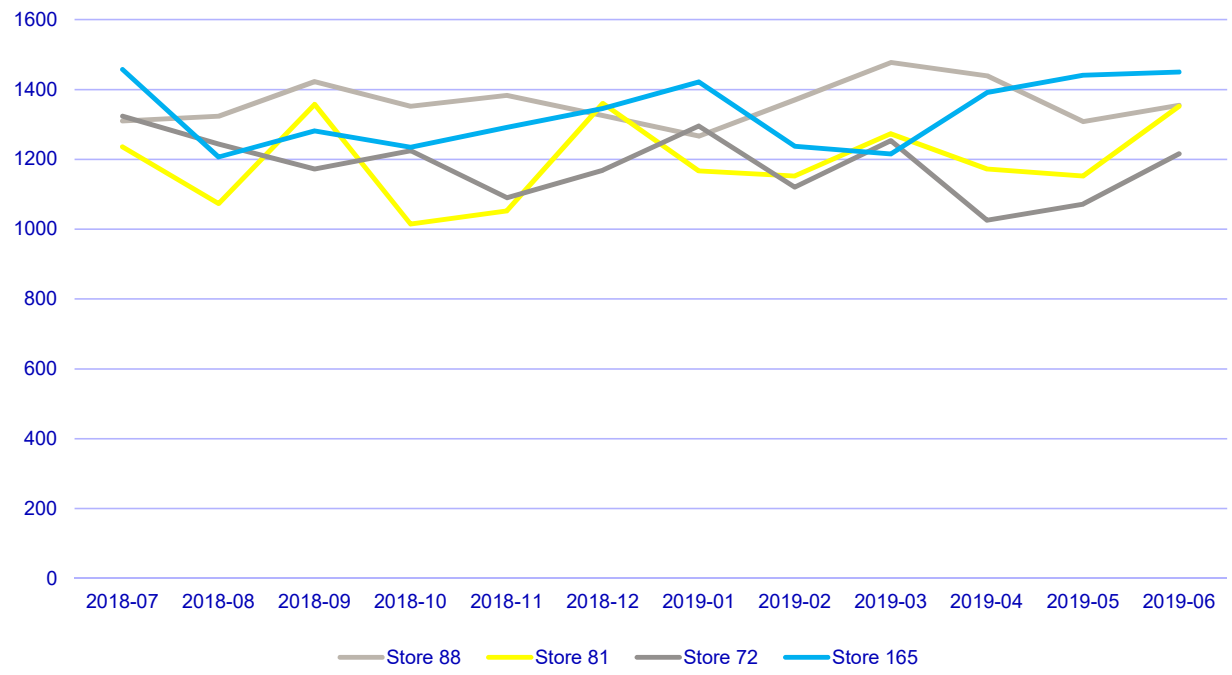
Sales Performance Comparison (Store 86 vs Control Store)

- Trial store (86) shows a clear increase in sales during the trial period
- Control store (83) shows a slight decline in performance
- Sales patterns diverge after the trial begins

quantium

Classification: Confidential

Sales Performance Comparison (Store 88 vs Control Store)



- Trial store (88) shows a steady increase in sales during the trial period
- Control store (165) shows a slight decline in performance
- Sales trends clearly diverge after the trial begins

quantium

Classification: Confidential

- All trial stores (77, 86, 88) showed consistent sales growth of 6%–7%
- Control stores showed stable or declining performance over the same period
- Sales improvement was observed only in stores with the new layout
- Results are consistent across multiple locations, reducing risk of randomness

"Recommend rolling out the new store layout across all stores to drive overall sales growth."

Expected Business Impact

- Expected increase in revenue across stores
- Improved customer purchasing behavior
- Scalable strategy with proven results
